

29.02.24.

process creation

- * `system()`
- * `fork()`
- * `wait()`
- * `waitpid()`
- * `exec()`
- * `clone()`

} System call.

`clone()` is very important it should be kept safe.

orphan process - parent is gone child is running.

`fork` → child process.

To stop zombie process } `wait()`
 } `waitpid()`

`Fork` :

↓ process is going on

`fork()`

↓

parent process

creates a child process

The both parent process and child process starts to run separately.
